

Dr. Anne-Marie Imafidon

{ My own words: Anne-Marie Imafidon is an extremely talented young woman, and more so because the field she loves is a field that needs more young women to be involved in. Science and engineering need more women to be involved, as women are some of the best scientists around and have shown to make great strides in improving our understanding of the world around us. It is vital that more young women, at a young age, are encouraged by parents and friends to pursue their dreams and passion for the arts of science and engineering . }

“Dr Anne-Marie Imafidon is a prodigy in every sense of the word. Aged 11, she was the youngest girl ever to pass A-level computing, and was just 20 years old when she received her Master’s Degree in Mathematics and Computer Science from the University of Oxford. Since then, she has forged an enviable CV, including positions at Goldman Sachs, Hewlett-Packard and Deutsche Bank. Then there are the Honorary Doctorates from Open University, Glasgow Caledonian University, Kent University & Bristol University and an Honorary Fellowship at Keble College, Oxford.

It is this wealth of experience and pioneering spirit that led her to co-found the STEMettes, an award-winning social initiative dedicated to inspiring and promoting the next generation of young women in the STEM sectors. Since its inception 6 years ago, it has exposed

more than 40,000 young people across Europe to Anne-Marie's vision for a more diverse and balanced science and tech community."
